This book provides physicians practicing at pain management clinics with comprehensive explanations of interventional therapeutic procedures including nerve blockade, as well as pharmacotherapy. Interventional therapeutic procedures including nerve blockade are categorized by devices into landmark ("blind"), X-ray-guided, ultrasound-guided, CT-guided, MR-guided, and endoscopic techniques. In this book, each chapter introduces one type of nerve blockade procedure
that involves several different devices. The authors describe the pros and cons of each technique and make recommendations for the best devices to use. This book will also help anesthesiologists and other physicians to improve their treatment techniques.

Background and Aim Post Dural Puncture Headache (PDPH) is a common complication after inadvertent dural puncture. It is described as severe postural headache that appears within 72 hours, is aggravated by standing position, and relieved by lying down. Treatment is conservative within the first 48 hours, it includes bed rest, IV hydration, caffeine and analgesics administration. If symptoms persist, invasive procedures such as saline or blood patch should be considered. In our preliminary study we attempted to perform an occipital nerve block after failure of conservative treatment as an alternative to blood patch. Methods:11 female patients diagnosed with PDPH were included in the study after failure of conservative treatment. Ultrasound guided Greater Occipital Nerve Block (GONB) was performed using 5 ml of bupivacaine and dexamethasone. When there was no improvement after GONB, a blood patch was performed. Results: 6 Patients showed complete improvement of symptoms after GONB, while 5 patients underwent a blood patch 3 days post GONB. Conclusion: Our preliminary data suggests that GONB might reduce the need for blood patch. It is considered as a minimally invasive procedure, and effective in treating PDPH that is unresponsive to conservative treatment.

From the Foreword, by Stewart J. Tepper, MD: “Dr. Samer Narouze was the first Pain Management anesthesiologist specialist in the US to become Board-certified in Headache Medicine by the United Council of Neurologic Subspecialists (UCNS). It is therefore fitting that he decided to put together a textbook on blocks, interventions, injections, and neuromodulation possibilities in this integrated interdisciplinary area of treatment for head and facial pain.”

“This constellation of authors and topics should offer a comprehensive roadmap for interventions to contemplate beyond conventional medications in both primary and secondary head and face pain disorders. The chapters are precise, concise, and immensely readable, and I am honored to have been offered the chance to introduce them and encourage my colleagues to read them.” This is the first book on interventional management of intractable, medically resistant head and face pain. It is edited and written by world-class leaders in headache medicine and features practical presentations of the entire spectrum of procedures, from simple to complex. Designed to help shorten the learning curve of practitioners who are beginning to use interventional headache procedures, it provides guidance in identifying patients who are appropriate candidates for this approach and includes a unique compilation of outcomes-based algorithms for different headache and face pain syndromes. Neurologists, anesthesiologists, pain physicians, physiatrists, neurosurgeons, and interventional radiologists are the intended audience.

Featured as a single volume, this is a comprehensive guide to possible nerve entrapment syndromes and their management. Each chapter covers a single nerve, or group of closely related nerves, and goes over the clinical presentation, anatomy, physical exam, differential diagnosis, contributing factors, injection techniques, neurolytic/surgical techniques, treatments of perpetuating factors, and complications. Nerve entrapments can occur throughout the body and cause headaches, chest pain, abdominal pain, pelvic pain, low back pain, and upper and lower extremity pain. As an example, one of the most common forms of nerve entrapment syndrome, Carpal Tunnel Syndrome, affects roughly 1 in 20 people in the United States, and is only one of several types of entrapment syndromes possible for the median nerve. Chapters are also extensively illustrated and include 3D anatomical images. The additional online material enhances the book with more than 50 videos – at least 2 for each nerve. This enables readers to easily navigate the book. In addition to a conventional index it includes a “Pain Problems Index” for searching by symptom. Peripheral Nerve Entrapments: Clinical Diagnosis and Management is a long-needed resource for pain physicians, emergency room physicians, and neurologists.
Very few therapeutic agents in clinical medicine have found indication for so many clinical conditions, and in such a short time as did botulinum neurotoxins (Botox and others). Chronic migraine, bladder dysfunction, dystonia, hemifacial spasm, blepharospasm, drooling, excessive sweating and spasticity are all approved by FDA and many other indications are in the near horizon. The aesthetic/cosmetic use of Botox and other BoNTs already has a huge market worldwide. Stroke, Multiple sclerosis, Parkinson’s disease, Cerebral palsy as well as brain and spinal injury are among clinical conditions in which some of patients’ major symptoms can respond to botulinum toxin therapy. Several books have been written on the subject of Botox and other neurotoxins for treatment of medical disorders (including two books by Jabbari both published by Springer 2015 & 2017). However, despite the huge interest and enthusiasm of the public to learn more about Botox and other toxins, there is currently no book in the market on this subject which is specifically designed to inform and educate the public on botulinum toxin therapy. Botulinum Toxin Treatment explains and discusses in simple language the structure and function of botulinum toxin and other neurotoxins as well as the rational for its utility in different disease conditions. Safety, factors affecting efficacy and duration of action, as well as cost and insurance issues are also addressed.
